

**\_knowscape mobile**  
AT SHARE,

**Boston**  
CyberArts Festival 2003

**\_knowscape** is a digital data territory: an electronic space made of links, connections, relations, knowledge. initially **\_knowscape** has been conceived as an alternative browser [ **\_knowscape**, 2001 ] using \*tracking\* and \*profiling\* techniques to question, to reverse them, to finally produce open data territories, \*open profiles\*.

**\_knowscape** evolves and becomes in 2003 a mobile downloadable space, with no defined size:  
**\_knowscape mobile.**

From now on, **\_knowscape mobile** moves to various places, performances and installations through physical space.

at SHARE (swiss house for advanced research and education, boston), where **\_knowscape mobile** stands from april 30 to may 9 2003, the sensible space of the building is immersed within the digital space. electronic devices open windows on this localized data territory, which allow visitors to interact either from the physical space or from the internet.

**fabric | ch**

6, rue de langallerie  
1003 lausanne  
switzerland

www.fabric.ch  
info@fabric.ch  
T +41.21.351.1020

**\_knowscape mobile** is thus an architectural space temporarily associating territory of data and physical space, linking architecture, knowledge and browsing.
